Pivot is the answer to this

Pivot Works process flow

Pivot aims to deliver the world's lowest cost waste treatment

- 1. Radical reorganization of treatment process
 - Extract costly-to-treat solids and BOD at head of process, reducing downstream treatment requirements and rendering aerated treatment processes obsolete
 - Significant savings in capex, footprint, and opex
- 2. Revenue generation
 - Reuse-led plant design leads to maximum resource recovery
 - Entire opex covered through sale of fuel treatment is the byproduct of our manufacturing process

Dewatering renders high-strength FS weak and homogenized

Pivot aims to delivers the world's lowest cost waste treatment

- 1. Radical reorganization of treatment process
 - Extract costly-to-treat solids and BOD at head of process, reducing downstream treatment requirements and rendering aerated treatment processes obsolete
 - Significant savings in capex, footprint, and opex
- 2. Revenue generation
 - Reuse-led plant design leads to maximum resource recovery
 - Entire opex of large plants covered through sale of fuel

Pivot Fuel is superior fuel

First burning trial at Utexrwa, Kigali

Pivot Fuel performance:

- 0.5 t Pivot Fuel in steam boiler
- 30 min to reach 5 barr boiler pressure
- = 1/3 the time of sawdust!

Operator feedback

- "This stuff is strong!"
- Easy to load no dust
- No odor

Opex vs. revenue

Pivot Fuel Production (t per day)

What does 12 t Pivot Fuel mean?

- 1100 m³ fecal sludge/day at 1.5% solids
- 340 m³ fecal sludge/day at 5% solids

 \rightarrow Pivot Works is a solution for large urban areas

Growth via a unique PPP model

Key costs	Source finance/revenue	Responsible party
Plant design, capital & construction	DFI loan/grant; mission- related investment	Client city – any repayable portion of funding recovered via long-term fixed-fee to lender or project company
Plant operation & maintenance	Sale of Pivot Fuel (>75%); tipping fees	Pivot Works

Next steps & key priorities

- Further driving down production costs
- Designing optimized effluent treatment working with CH2M
- Quantifying cost reduction in capex & opex compared to conventional alternatives
- Building pipeline for expansion
