

# FSM4

# Co-treatment of Septage with Municipal Wastewater in Medium Sized Cities in Vietnam

**David Robbins**

Sher Singh PE, Ross Kearton

**SCE Aménagement & Environnement *for*  
Cities Development Initiative for Asia**

# Background – Can Tho, Vietnam

- 1,240,000 inhabitants
- 205,000 households
- 1 m<sup>3</sup> of septage per household per year
- 17,000 m<sup>3</sup> / month (566 m<sup>3</sup>/day)
- Actual amount collected: 200 m<sup>3</sup> / month

# Vietnam Wastewater and Septage Régulations

Decree 80/2014/ND-CP

- Collection of fees for waste sludge management
- Requires characterization of waste sludge
- Sludge shall be brought to location of wastewater treatment plants, if no other licensed facility is available

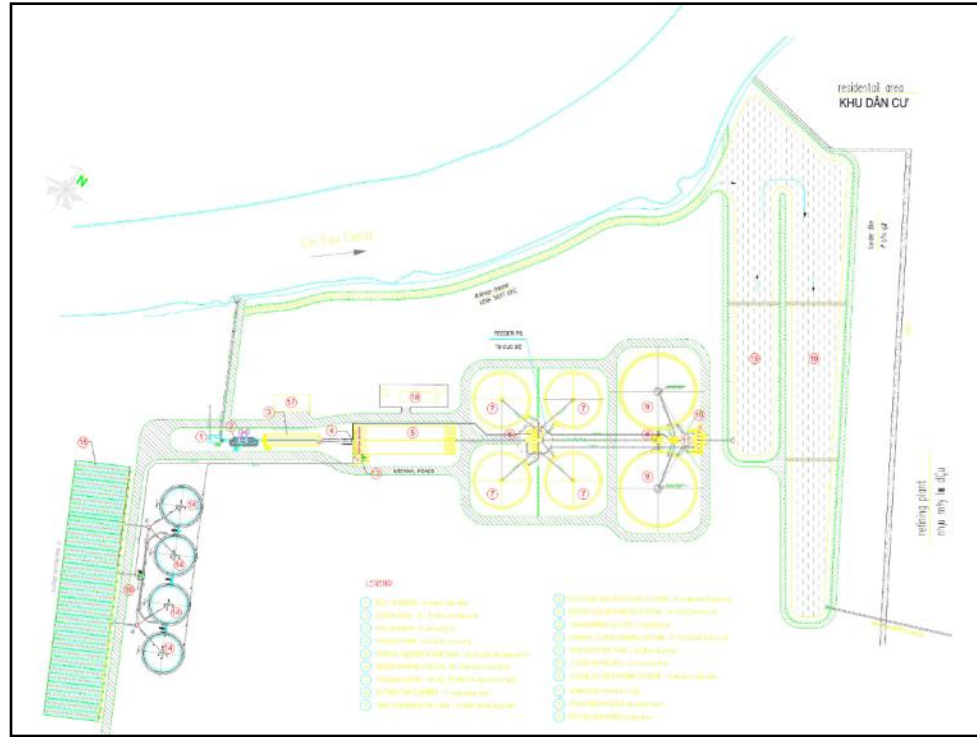

# Table 1: QCVN 14: 2008 -- National Technical Regulations on Domestic Wastewater

| No. | Parameter                                  | Unit       | A     | B     |
|-----|--|------------|-------|-------|
| 1   | pH   | ---        | 5 - 9 | 5 - 9 |
| 2   | BOD5 (20 °C)                               | mg/L       | 30    | 50    |
| 3   | Total suspended solids (TSS)               | mg/L       | 50    | 100   |
| 4   | Total dissolved solids                     | mg/L       | 500   | 1000  |
| 5   | Sulfide (as H <sub>2</sub> S)              | mg/L       | 1.0   | 4.0   |
| 6   | Ammonium (as N)                            | mg/L       | 5     | 10    |
| 7   | Nitrate (NO <sub>3</sub> <sup>-</sup> )    | mg/L       | 30    | 50    |
| 8   | Animal fat and vegetable grease            | mg/L       | 10    | 20    |
| 9   | Total surface-active substances            | mg/L       | 5     | 10    |
| 10  | Phosphate (PO <sub>4</sub> <sup>3-</sup> ) | mg/L       | 6     | 10    |
| 11  | Total coliforms                            | MPN/ 100mL | 3.000 | 5.000 |

*A is for wastewater discharged into a water body used for the purpose of domestic water supply. B is for a water body not used for domestic water supply*

# Co-treatment system for Can Tho - 17,000 m<sup>3</sup> / day

# Septage discharge stations

*One proposal for septage collection and discharge to the WWTP*

# Estimating impacts of co-treatment

- $(\% \text{ septage} \times \text{constituent septage concentration}) + (\% \text{ sewage} \times \text{constituent sewage concentration}) = \text{combined influent concentration of the constituent}$
- $(100\% - \% \text{ constituent reduction}) \times (\text{combined influent constituent concentration}) = \text{effluent concentration of constituent}$
- **Compare** effluent concentration to GoV QCVN 14: 2008 -- National Technical Regulations on Domestic Wastewater.

# Table 2: Hanoi Septage Characteristics

|                          |                    | Measured (mg/L) |        |         |  |
|--------------------------|--------------------|-----------------|--------|---------|--|
| Parameter                | Abbreviation       | Max             | Min    | Average | Reference  |
| Biological Oxygen Demand | BOD <sub>5</sub>   | 22,400          | 12,000 | 16,033  | M. Bassan, H. Harada, L. Schoebitz, L. Strande, N. Viet Anh, and V. T. Hoai An |
| Chemical Oxygen Demand   | COD                | 83,830          | 2,830  | 30,526  |  |
| Suspended Solids         | SS                 | 71,077          | 1,380  | 21,173  |  |
| Ammonium Nitrogen        | NH <sub>4</sub> -N | 1,670           | 50     | 390     |  |
| Total Nitrogen           | T-N                | 1,670           | 180    | 1,285   |  |
| Total Phosphorus         | T-P                | 2,490           | 30     | 202     |  |

# Table 3: Hanoi WWTP Influent Concentrations\*

|                    | Influent Concentrations (mg/L) |           |                   |        |            |
|--------------------|--------------------------------|-----------|-------------------|--------|------------|

***Fails for class A effluent: BOD, SS and TP***

# Table 7: Septic Tank Effluent (mg/L)

## Septic Tank Liquid and Solid Layers

| Parameter | Minimum | Average | Maximum |
|-----------|---------|---------|---------|
| BOD       | 60      | 259     | 920     |
| COD       | 91      | 413     | 1780    |
| SS        | 12      | 134     | 733     |
| T-N       | 1.3     | 38      | 349     |
| T-P       | 0.9     | 9.5     | 72.4    |

*Reference: Hidenori Harada, Pham Nguyet Anh, Nguyen Viet Anh, Shigeo Fujii (2015). Desludging Effect on the Performance of Septic Tanks in Hanoi. Hanoi, 2015. Data is for 36 septic tanks.*

## Table 8: Estimated WWTP Effluent with 5% of Septage effluent after sedimentation

| Parameter | Septage Effluent | WWTP Influent | Combined Influent | Removal Efficiency | Estimated Effluent | GoV Class A |
|-----------|------------------|---------------|-------------------|--------------------|--------------------|-------------|
| BOD       | 259              | 100           | 108               | 87%                | 14                 | 30          |
| COD       | 413              | 140           | 154               | 82%                | 28                 | ---         |
| SS        | 134              | 75            | 78                | 80%                | 16                 | 50          |
| T-N       | 38               | 36            | 36                | 76%                | 9                  | ---         |
| T-P       | 9.5              | 6.5           | 7                 | 10%                | 6                  | 6           |

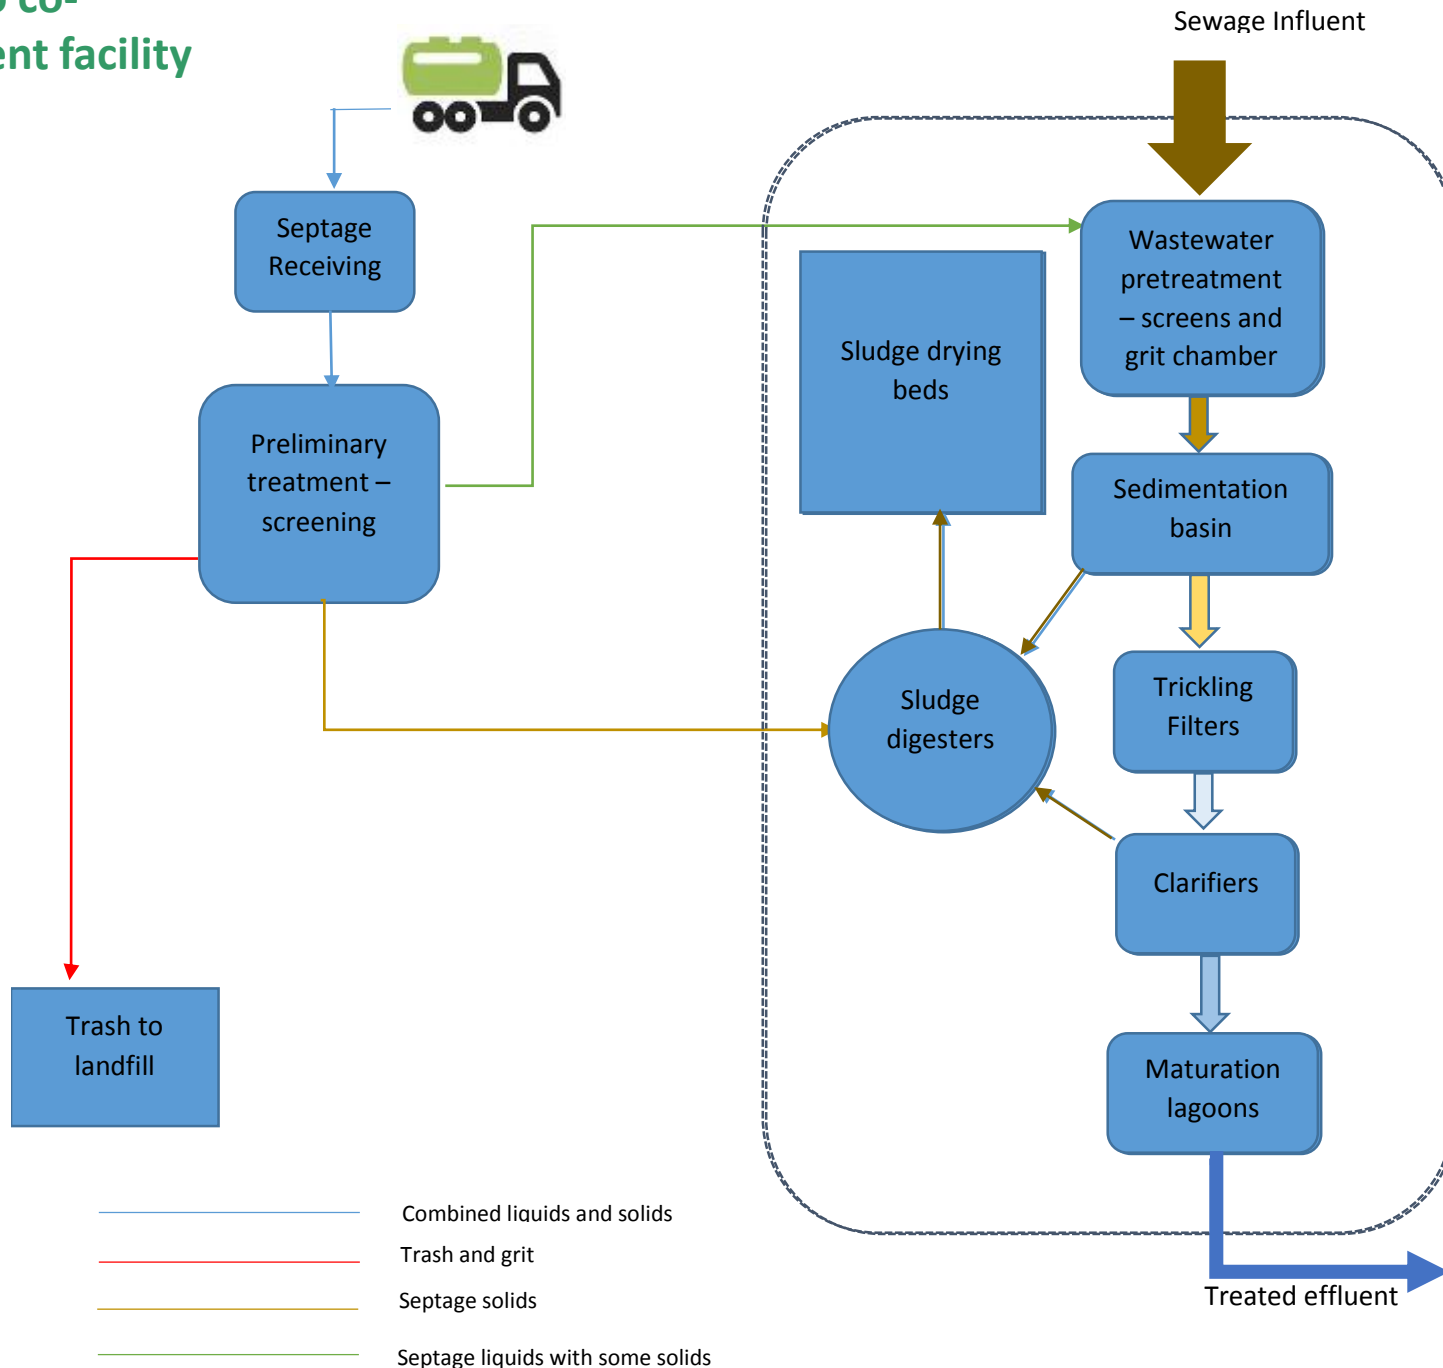

# Proposed septage receiving station

- Easy connection for trucks
- Coarse screening
- Sedimentation. *Grit and inorganic solids removal in tank*
- Pumps liquids to existing treatment plant headworks, and solids to solids processing unit
- **Good for up to 2% of WWTP capacity, then mechanical dewatering**

Phase 1 – Septage receiving with screening only

Can Tho co-treatment facility

# Conclusions

- Plant scale testing should start by adding only the liquid fraction of the settled septage.
- Start at 2% and work upward to about 5% monitoring the WWTP effluent concentrations for parameters specified in the GoV regulation
- Pay special attention to nutrients as potential limiting factors.
- Mechanical dewatering will likely be required when septage volume exceeds 2%

# Thank you!

*Dave Robbins* [dmrobbins10@gmail.com](mailto:dmrobbins10@gmail.com)
