

**1.** Take off the lid of the vault in use.

**2.** Make sure that the urine drains toward the urine outlet and the faeces goes into the vault.

**3.** Use the designated space for anal washing (**no water in the vault!**)

**4.** Add 1-2 cups or handfuls of ash to the vault.

**5.** Replace the lid.

**6.** Wash your hands with soap after every use.

### Important information:

- **If there are flies/odors:**
  - Beware of not adding water or urine to the vaults for faeces;
  - Add more ash to the vault;
  - Make sure that the fly screen is not broken;
  - Use a flytrap (bottle cut off and inserted into the wall of the vault).
- It is necessary from time to time to spread out the cone of faeces that forms in the vault – use a stick.
- When the first vault is full, use the second vault. The contents of the first vault are left to dry at least six months to eliminate the pathogens.
