

PREPARATION

Make furrows or holes 5-10 cm from the plants.

APPLICATION

Apply the urine in the furrow or holes – do not apply urine on the leaves.

CLOSE FURROW AND WATER DOWN

Close furrows/holes and water down (or apply the urine after a rain).

For tight growing crops:

Dilute the urine with water (at least 100%) and apply on the crops. Water quickly down with plenty of water to wash the leaves and avoid burns.

Dose : Takin Ruwa can replace urea for nitrogen supply (concentration ~ 5 g N/l)
 Cereals ~ 0,5 l/plant (in two fractions)
 Vegetables ~ 1 l/plant (in several fractions)
 Tight growing crops ~ 2 l/m² (in several fractions)

Safety measures:
 - Use gloves and mask;
 - Do not apply urine during the last two weeks before harvest.
