*AT THE*  
**"TRAINING FOR NGO'S ON ECOLOGICAL SANITATION IN RURAL & PERI-URBAN AREAS"**  
APRIL 24-26, 2008  
SOUTH BEA RESORT HOTEL, DUNAGUETE CITY

Single vault UDDT with mobile containers for faeces collection

The full containers are covered with fly screen and are stored in the vault.

Glenda Sol briefs the participants for the practical re-use exercise.

At the bottom is a container with dried feces (1 year)  
and a container with urine (1 month storage).

Two participants prepare the field by digging holes for the seeds.  
The field is owned by the owners of the UDDT (1 big family).

Seeds included squash, string beans and eggplant.

Dried faeces are used as soil conditioner prior to sowing.

Dried feces are thrown into the seed hole.

Some people prefer to use a shovel for moving dried faeces.

Putting the seeds into the seed hole.

Watering the seeds (water only).

Urine is taken from the storage container and diluted with water

Diluted urine is applied as fertilizer on ornamental plants
