

# India Field Testing of an Integrated Sanitation Platform with Electronic Public Toilet (eToilet) and Off-grid Anaerobic Membrane Bioreactor (NEWgenerator)

**Robert Bair & Midhu S.V.,**

J. Calabria, O. Ozcan, W. Sutton, P. Zydek, D.H. Yeh

**University of South Florida & Eram Scientific Solutions**

BILL & MELINDA  
GATES foundation

Eram Scientific

# Slum Sanitation

- Dependence on communal toilets
- High density and land value
- Compact treatment technology needed
- Low infrastructure coverage

# Project Goal

Field testing of off-grid sanitation and resource recovery platform

International Faecal Sludge Management Conference

International Convention Centre, Durban, South Africa

29-31 October 2012

 Eram Scientific

Clean water

Fertilizer

# Front End: eToilet

- Indian company
- Focused on improved sanitation through automation
- Over 2100+ units installed throughout India
- Automated eToilets with remote monitoring capabilities

Awake to a  
Clean India  
with eToilet

India's First  
Electronic  
Public Toilet

# Back End: NEWgenerator

- Decentralized, onsite
- Safely processes wastes
- Modular & Off-Grid
- Compact design
- Water recycling

# Pilot Design

Funding through Reinvent the Toilet Challenge India

BILL & MELINDA  
GATES foundation

- Coupled with 2 eToilets
- Completely off-grid
- Designed for 100 uses/day
- Onsite water recovery

# Features of eToilet

- Easy to Install and Service
- Solar Powered System
- Stainless Steel Closet with SS Floor
- Remote monitoring
- Self-cleaning
- Ceiling light & exhaust fan
- Sensor enabled water saving design

# NEWgenerator Construction

# Location

- Pulluvila, Kerala (South India)
- Coastal community
- School with approx. 1500 students  
+ usage by local community

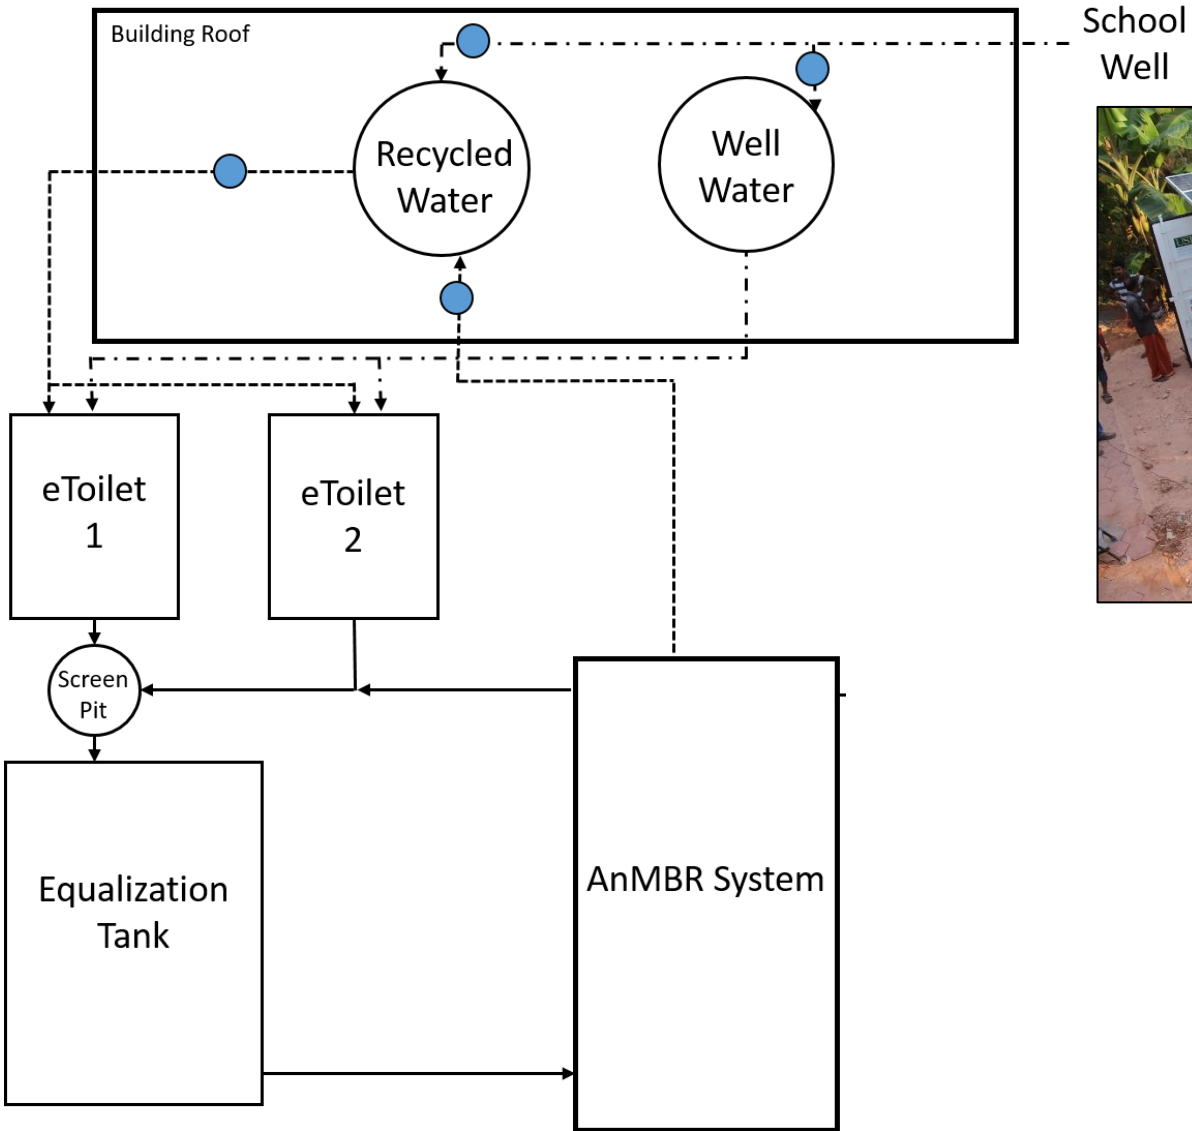

# Installation and Interfacing

# Site Layout

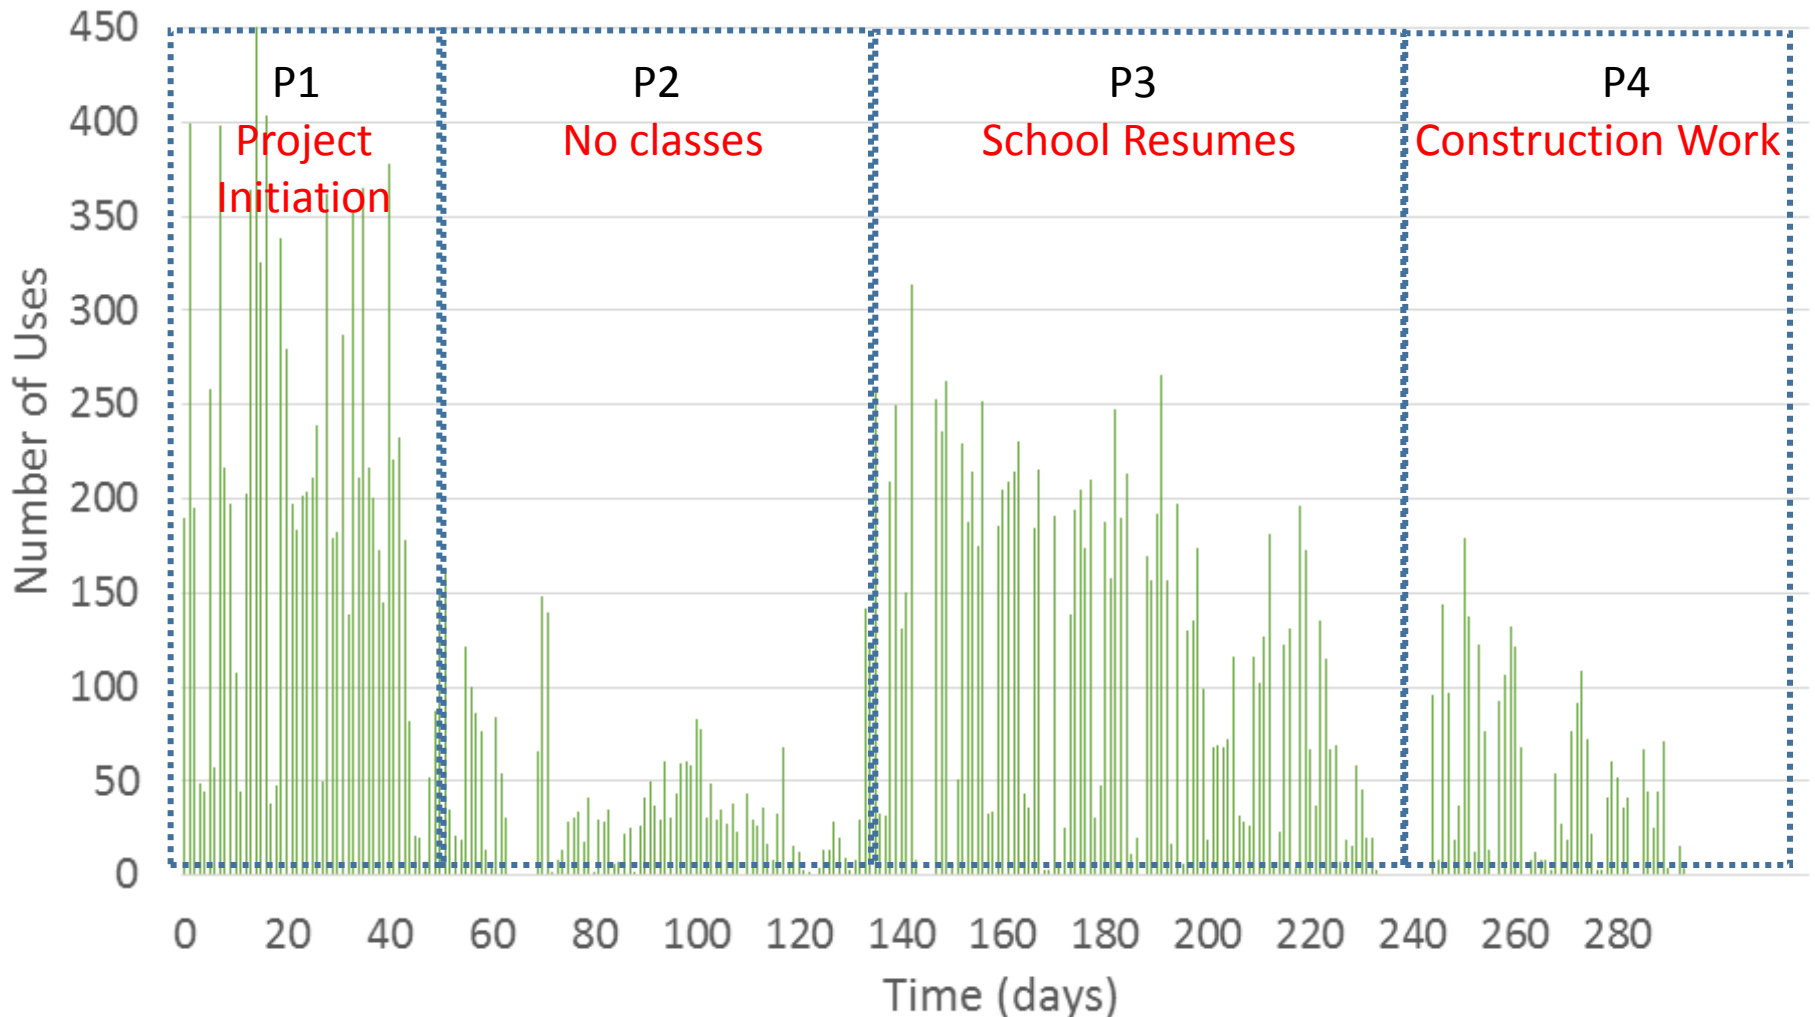

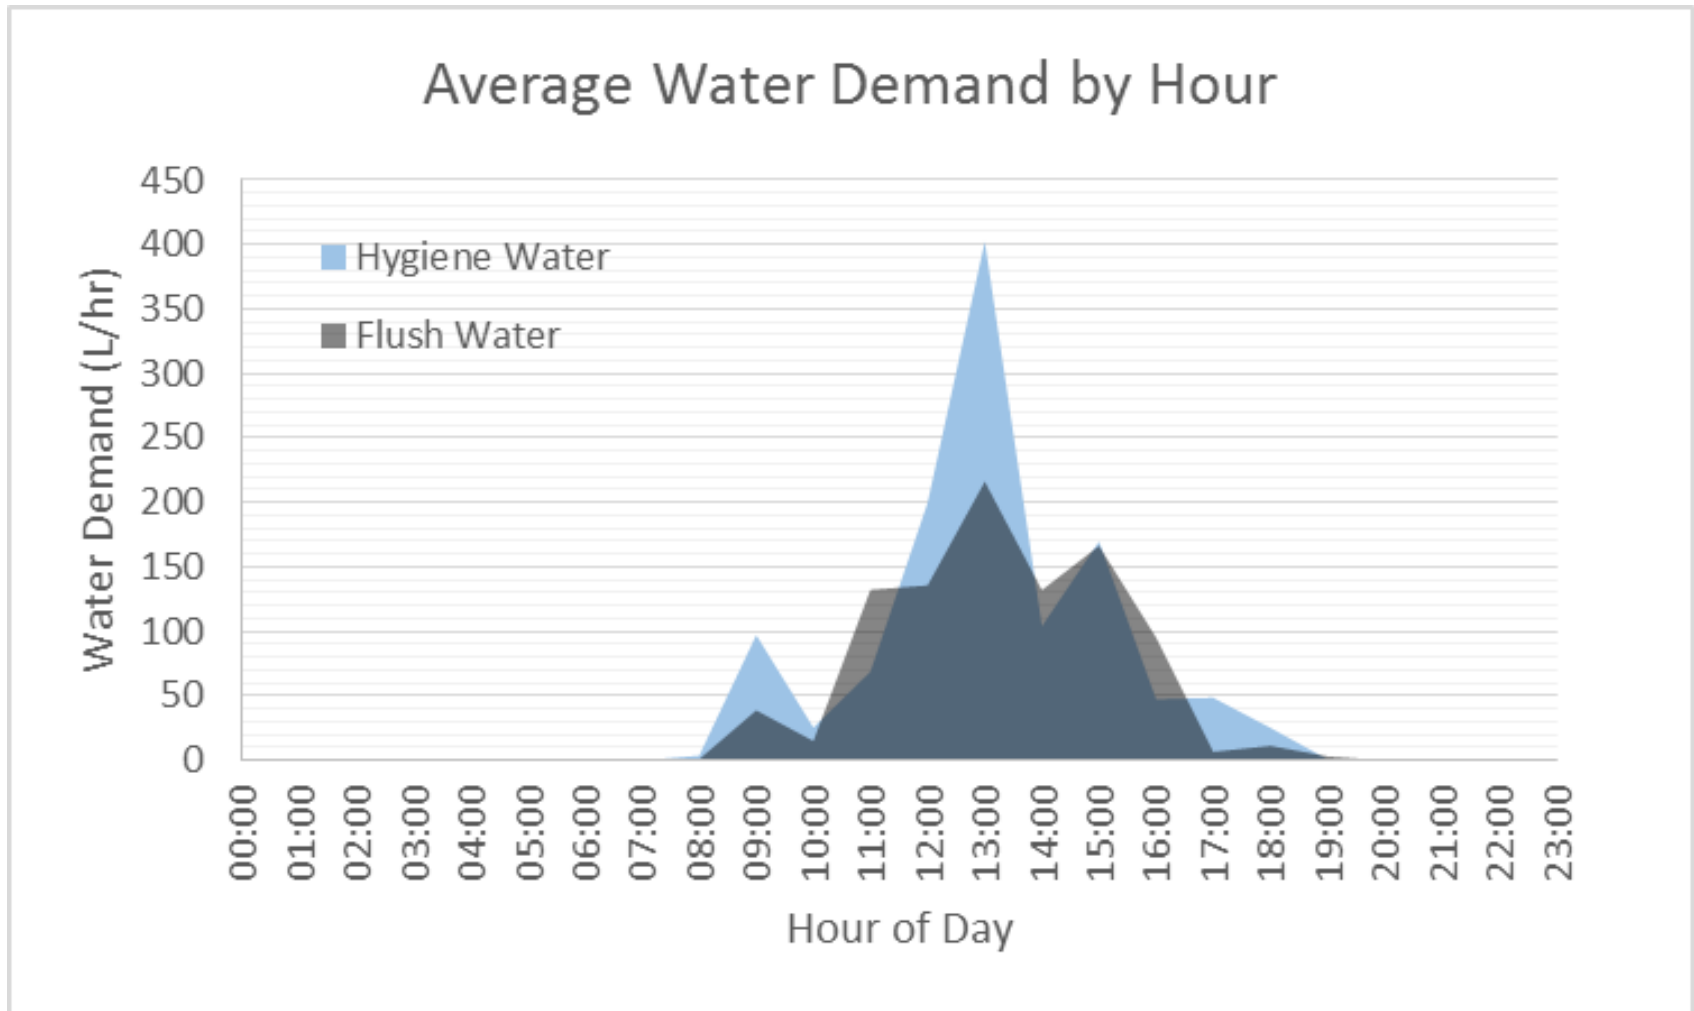

# System Usage

#Uses	P1	P2	P3	P4
Avg.	220	47	120	40
Max	454	163	314	179

Daily Combined Toilet Usage: Entire Project Timeline

# Flow Data

34% of avg. daily hygiene water demand in 1 hr

23% of avg. daily flush demand during in 1 hr

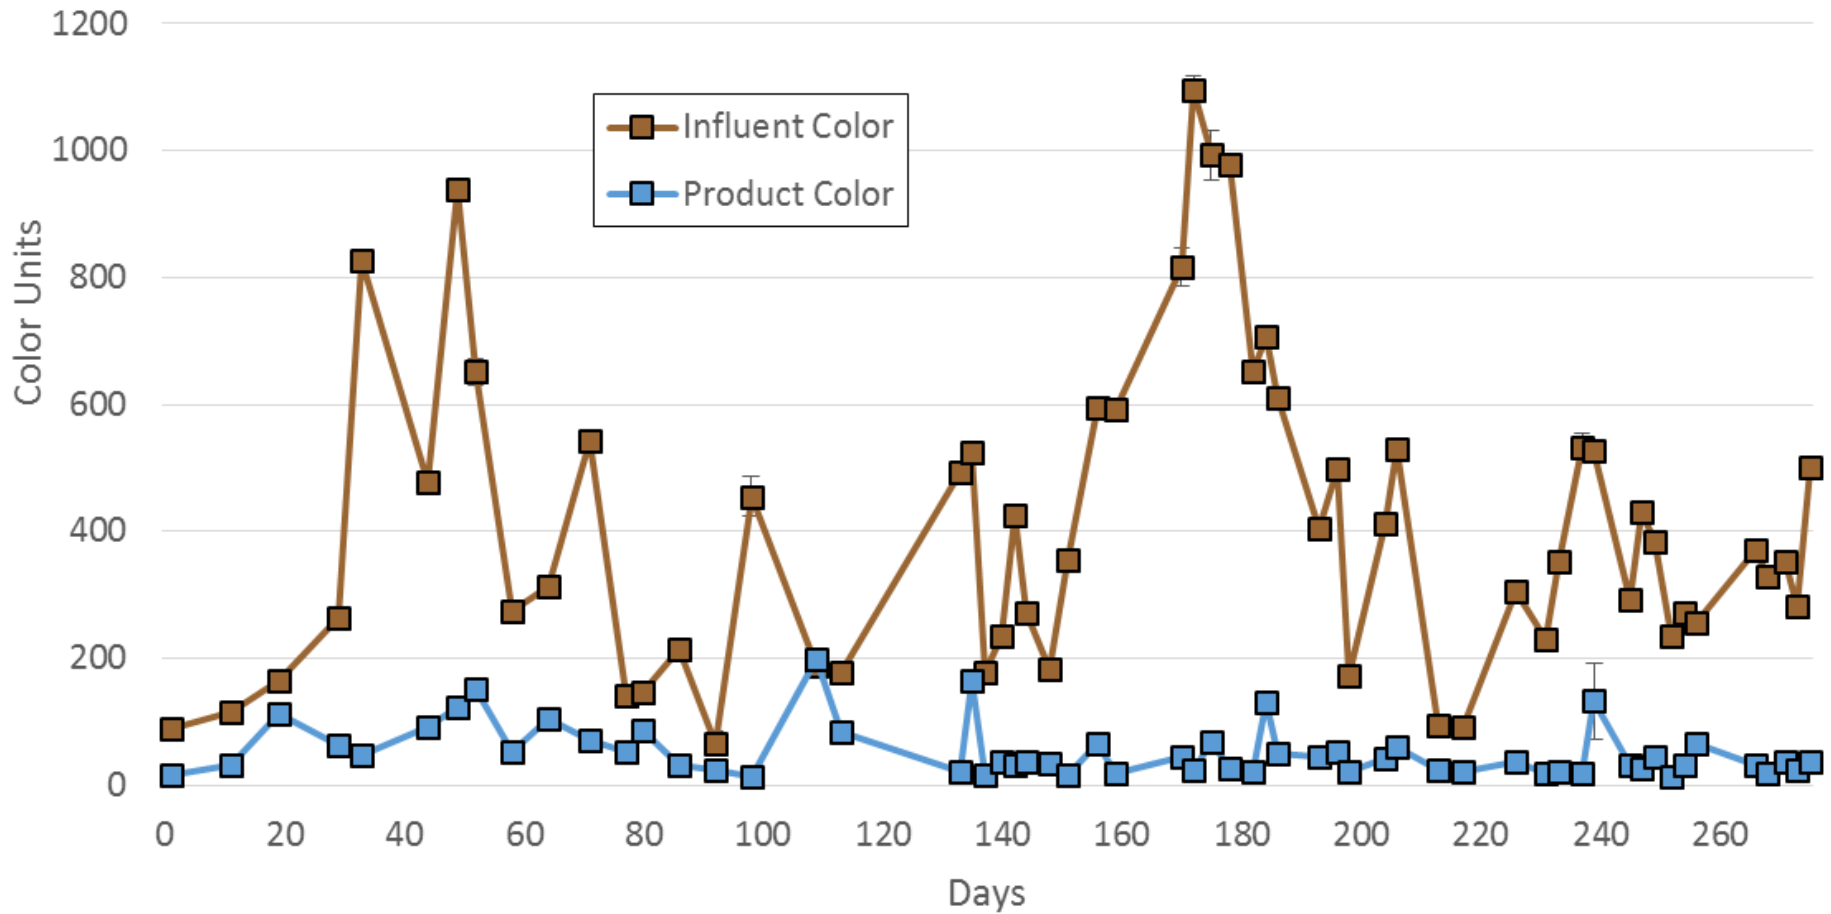

# Turbidity

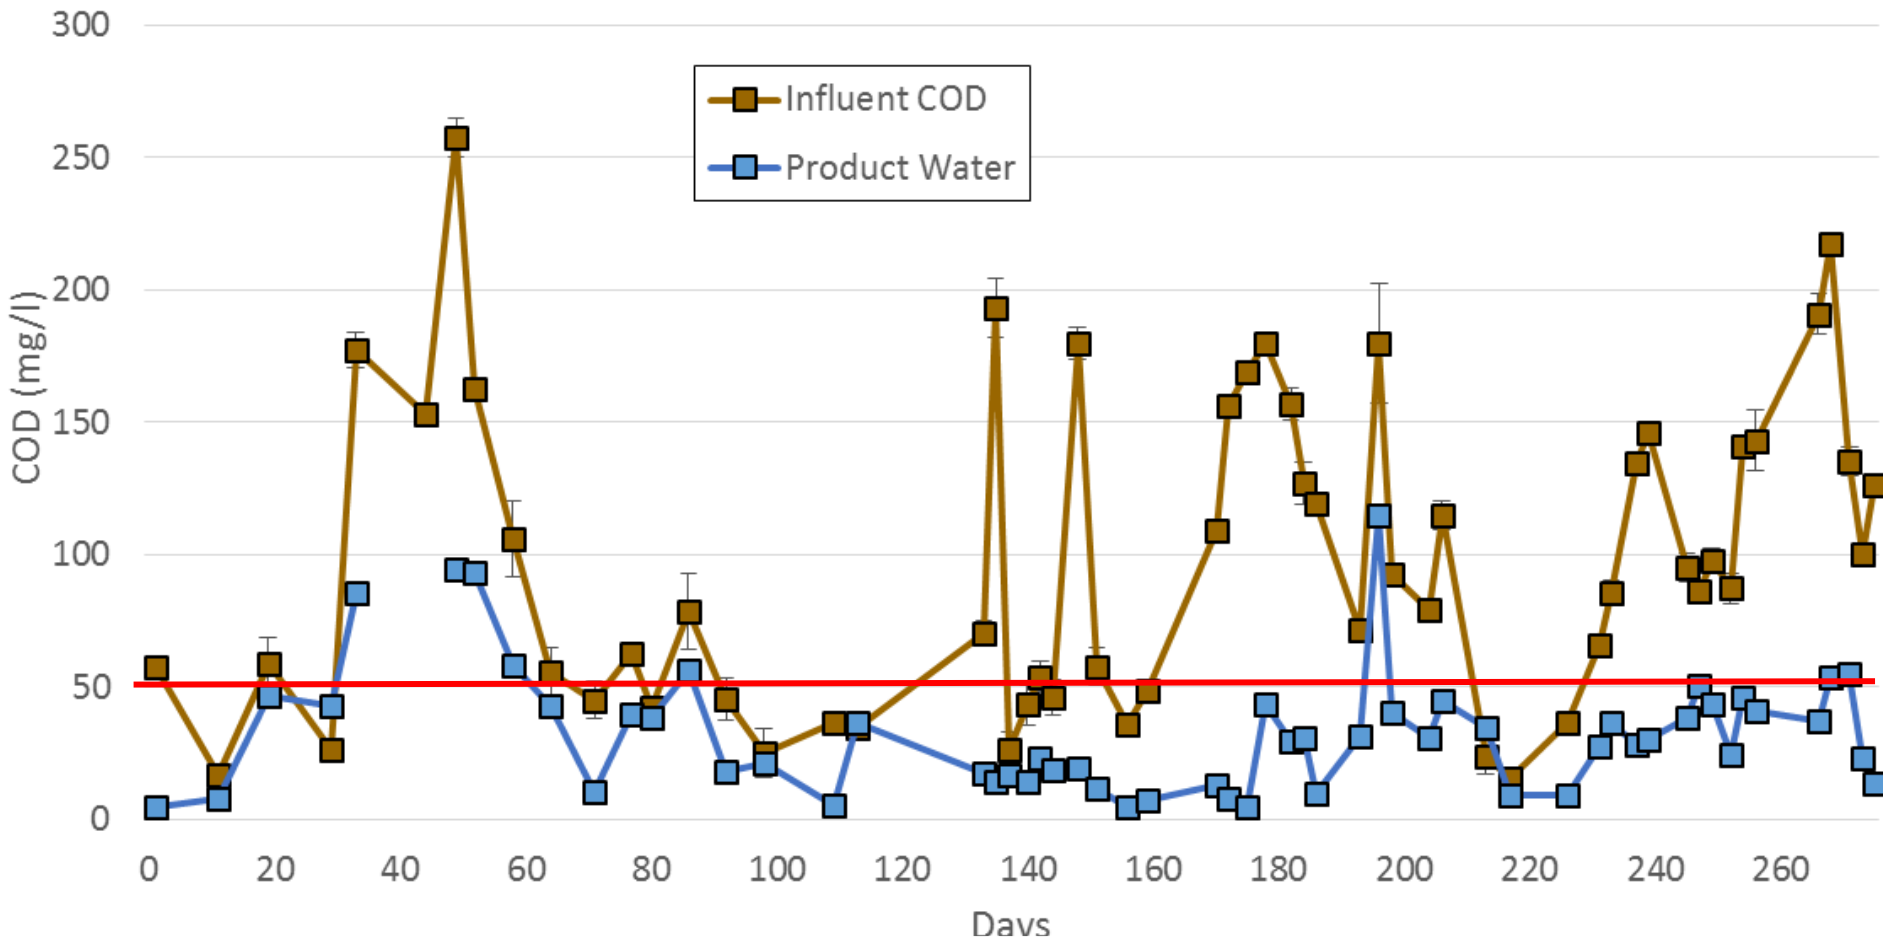

Parameter	Influent	Post Membrane	Product
Avg.	60	14	4
% Removal			<b>91</b>
Max	725	80	24

## Color

Parameter	Influent	Post Membrane	Product
Avg.	407	132	52
% Removal			<b>85</b>
Max	1096	479	197

## Chemical Oxygen Demand (COD)

\*Average removal throughout trial period. When influent COD increases above 100 mg/L – the removal increases to 86%

Parameter	Influent	Post Membrane	Product
Avg.	98	38	32
% Removal			<b>72%*</b>
Max	258	86	107

# System Pilot: Pulluvila, Kerala

- Operated in 2016
- Successful integration of two technologies
- Off-grid operation
- Water recycling

# Lessons Learned

- High seasonal and flow variability
- Low strength wastewater in institutional settings
- Integrated system capable of operating off-grid
- High quality water production from integrated system
- System meets many of the criteria for slum implementation

# Highlighted Challenges: Anaerobic MBR

## Remaining Challenges:

- Enhancing permeate polishing for optimized ammonium and residual organics removal (improve energy and performance)
- Further miniaturization / process intensification– footprint reduction
- Beneficial small-scale biogas utilization (e.g., fuel cell for direct conversion to electricity)
- Testing over wide range of conditions (wastewater and fecal sludge characteristics, cultural and site conditions)

# COD: Comparisons

COD Ramp up in a smaller-scale unit in Tampa, Fl. 150 mg/l – 12,000 mg/l COD

# External Testing

Testing conducted by the Dept. of Environmental Technology, CSIR-NIIST.

Date	Fecal Coliforms (CFU/ml)		BOD (mg/l)	
	Influent	Product	Influent	Product

ND1: Non detection – Parameters were below the detection limit of the respective test.

N/A: Not applicable – Parameter was not tested for that particular sample date.

Pending: Awaiting values from external lab

# Project Phases

## Site Prep and Project Initiation

**2. eToilet Design and Development**-Data analysis, requirement specification finalization, Feasibility study design and development, modules procurement and testing, design validation, approval for production.

**6.Integrated System Testing Using Real Wastewater and Ambient Conditions-**Integrated system testing using recycling of treated water, testing of product water with all necessary parameters , eToilet functional study and refinements.

**7.User Feedback and Education**

**8.Lifecycle Cost Analysis of Membrane System-** In progress

**9.Design Improvement and Manufacturing Docs-**Improvements and refinements in eToilet and NEWgenerator- In progress

**10.Completion of final report-**Documentation in various data collection and testing reports in progress
