## 1. Introduction

The document guides the user to use the Sanitation Inventory Website. The user can enter new inventory / toilet details or update/edit the existing details. The user can also use query module to search inventory based on specific parameters.

There are 2 types of users to use the web application. They are admin user and Field user. The admin user can do the addition, update, delete of all the inventory details. The field user can simply view and search the inventory details of the toilet but cannot make any entries/update.

The web application can be closed (logout) by clicking arrow icon next to the login name displayed at the top right side.

## 2. Home page

When the website is accessed, the home page appears and the user has to enter the following in Admin Login box.

Sanitation Inventory - Shimla Municipal Corporation

SHIMLA MUNICIPAL CORPORATION  
WHERE IS WORSHIP  
SHIMLA

giz Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH

**Admin Login**

admin

.....

Keep me signed in **Login**

- a. Enter login id
  - b. Enter password
-

The login id and password should be correctly entered; otherwise the website will not be accessed, error message appears. When the website is accessed, the webpage displays user login at the right top and the applicable menus pertaining the user. The user can click any menu to access appropriate page. The menus are described below.

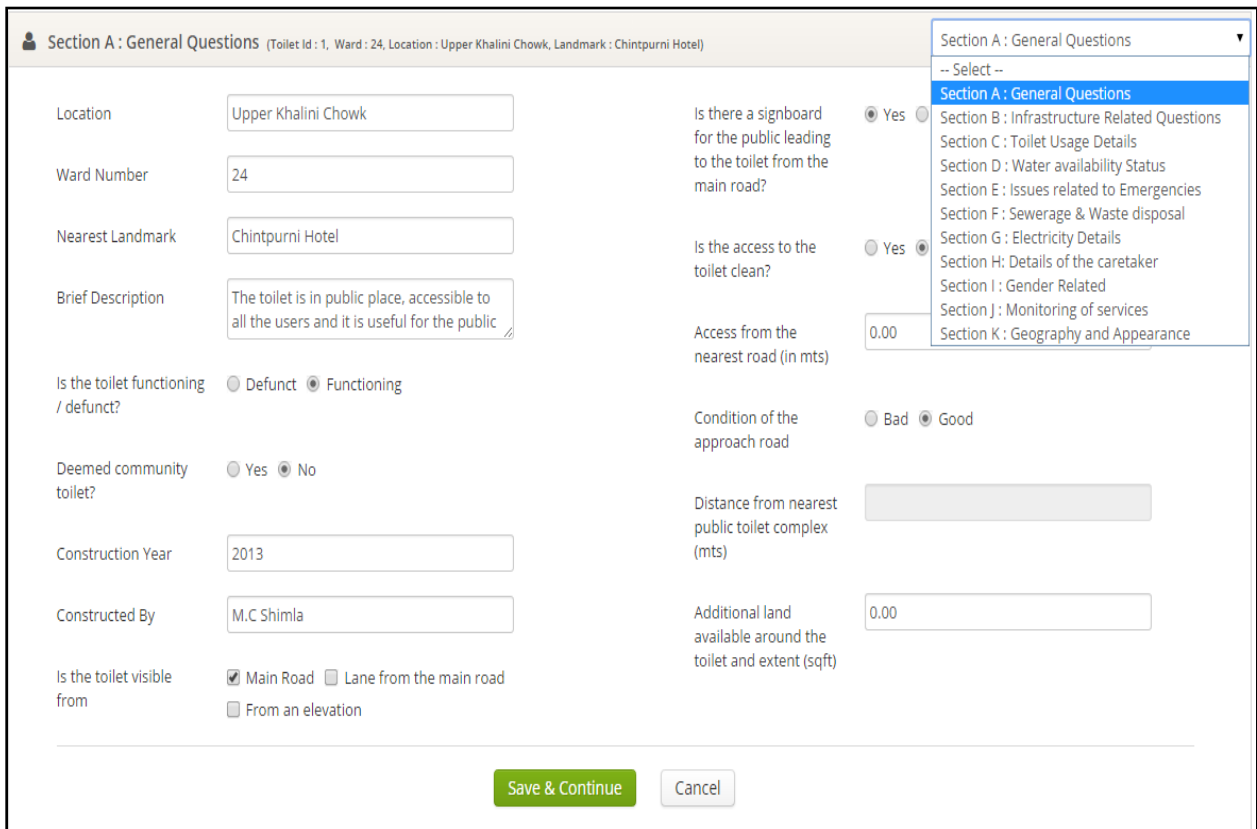

### 3. Inventory

When the user successfully accesses the website, inventory list of all toilets will be displayed.

#	WARD	LOCATION	LANDMARK	
1	24	Upper Khalini Chowk	Chintpurni Hotel	 
2	24	Hanuman Temple	Near Post Office	 
3	24	Bhagwati Nagar Lower Khalini	Below Government School	 
4	1	Bhrari Bazar	Below Temple	 
5	1	Police Line Bhrari	Below Police Ground	 
6	1	Longwood	Near RKMV College	 

- Each row in the list has the serial number, ward number, location and landmark of the toilet
- The pencil icon  can be clicked to edit the details of selected toilet.

- c. The delete icon  can be clicked to delete the selected toilet from the database. But the user has to be very sure before the toilet is deleted. Confirmation message will be displayed before deletion of toilet and the user can make sure of the deletion.
- d. New Entry button is used to enter details for new toilet if any new toilet is constructed in Shimla.
- e. When edit icon of the toilet is clicked, the following page appears and the user can edit details of selected toilet.

Additional land available around the toilet and extent (sqft): 0.00

Navigation menu: Section A : General Questions, -- Select --, Section A : General Questions, Section B : Infrastructure Related Questions, Section C : Toilet Usage Details, Section D : Water availability Status, Section E : Issues related to Emergencies, Section F : Sewerage & Waste disposal, Section G : Electricity Details, Section H : Details of the caretaker, Section I : Gender Related, Section J : Monitoring of services, Section K : Geography and Appearance

Buttons: Save & Continue, Cancel

There details of toilet are captured in 11 sections, starting from A to K. The parameters of toilets are grouped under respective sections. In edit mode, the user can navigate to any section by

=====

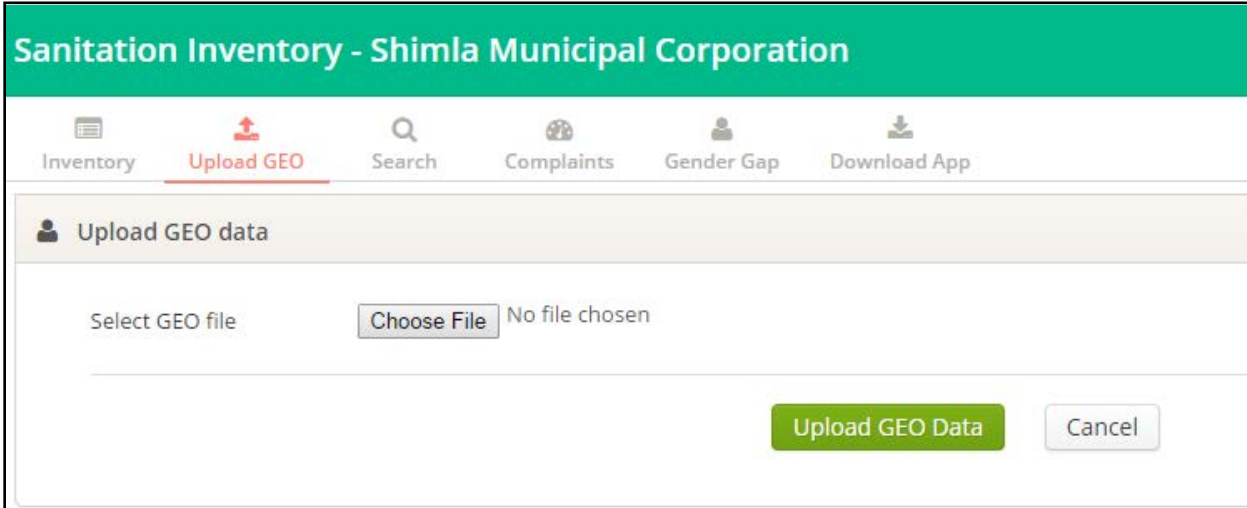

using the dropdown, which displays all the sections. In edit mode, the already entered / updated details will be displayed and the user can edit

- f. After update/edit in any section page, the user has to click save button to save the changes done.
- g. In sections A to J, the user has to enter the appropriate values for all the parameters by choosing radio options or check boxes or dropdown or entry in text field.
- h. In Section K, the user has to upload the correct photos in appropriate places. The photos should be available in the hard disk / any storage disk of the system. The user has to choose the correct image file by clicking the Choose File button. When the image is chosen, the file name will be displayed and after save, the thumbnail (small image) of the image will be displayed. The user can upload any number of images before save. On click of thumbnail, the image will be displayed in larger size for the user to view the image. The user can also delete the image using delete icon, if the image is not correct/not wanted.
- i. In Section K, the geo reference id refers to the unique name saved for the geo location (latitude, longitude and altitude captured for each toilet using Garmin equipment. The latitude, longitude and altitude fields are not editable and they are updated to the database through the upload utility.
- j. Each section will have save button and so any change done will be saved only on clicking the save button in each page.
- k. When new entry button is clicked, the Section A appears and the user has to fill the details and click save button. After the details are saved, the section B appears and subsequent pages will appear till section K after successful save in the database. Like Edit mode, dropdown will not appear at the top for the new entry.
- l. The user can navigate to previous and next pages using the previous and next buttons displayed at the bottom.

---

## 4. Upload Geo

This page is used to update the geo data of the toilet which is captured in the Garmin. When a toilet is geo tagged using the Garmin, the latitude, longitude and altitude are stored in the Garmin instrument in a file format (.gpx). Each toilet location should be given a specific unique name and this name should be updated in the Geo Ref Id field of Section K. This file is loaded / transferred from Garmin to computer system. The file is chosen here to upload the geo data of the toilets.

The screenshot displays the 'Sanitation Inventory - Shimla Municipal Corporation' web application. The top navigation bar includes 'Inventory', 'Upload GEO' (highlighted), 'Search', 'Complaints', 'Gender Gap', and 'Download App'. Below the navigation, the 'Upload GEO data' section is visible, featuring a file selection area with a 'Choose File' button and the text 'No file chosen'. At the bottom right of this section are two buttons: 'Upload GEO Data' and 'Cancel'.

After the .gpx file is chosen, the user has to click Upload Geo Data button to update the geo data of the toilets to the database. This methodology is followed to avoid any human error in entering the long number of geo data. Since the geo data is directly updated to the database from this page, the manual entry is avoided in Section K. Before uploading data using this page, the user has to ensure that correct Geo ref id is filled in Section K for the toilets that are tagged using Garmin. The name given in Garmin instrument while tagging the toilet should be entered in the inventory page of Section K for the specific toilet and only then, the names are matched and geo data are updated in the database for the toilets.

---

## 5. Search

Search module is used to search toilets based on input of one to many parameters. The user can choose any parameter and based on the value provided, the toilets matching the value in the database will be displayed in the result grid.
