

# Experience of Ecological sanitation latrines in Tanzania

By Imani Kasisi  
Executive Director  
Water and Environmental Projects  
Maintenance organization  
(WEPMO)

# Background

- WEPMO has been working on ECOSAN latrines since 2001 with financial support from Wateraid UK.
- The implementation was including construction of demonstration latrines to Temeke municipal
- Then 2003 we got other organizations who were interesting on ECOSAN latrines e.g. SIMAVI from Netherlands, WaterCan from Canada, Plan International, Concern World Wide and World Bank. Those organization supported WEPMO to implement ECOSAN latrines.

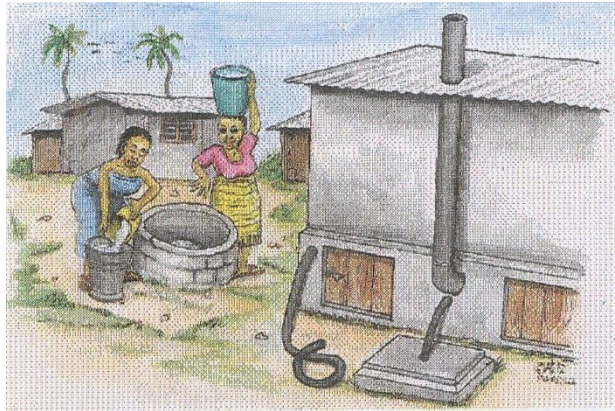

# Process of construction of ecosan latrines in Inyala ward Mbeya

# Ecosan latrines in mikese ward primary schools

# Ecosan latrines protecting groundwater contamination

Products of Ecosan are easy to harvest and useful for both food and cash crop production.

Ecosan products are good manure and may increase Coffee, Maize, Timber and beans production

Water and Environmental Sanitation  
Projects Maintenance Organisation

## WEPMO

*• Eradicate poverty Environmental  
pollution and communicable  
diseases like cholerae by  
construction and use  
of Ecological sanitation  
Toilets (Ecosan)*

## ECOSAN TOILET

It is low cost in construction and does not require excavation of pit during construction

This is a new technology important to fight against poverty and diseases

- The Ecosan toilet can separate urine and faeces
- Prevent ground water pollution, hence minimize infectious diseases.
- Ecosan toilet provides quality fertilizer for agricultural activities.
- It is easy to clean.
- It's cheaper compare to other technologies
- It is safe and easy for every user, i.e.kids, adult e.t.c.
- There is a logical linkages to agriculture, forestry, income generation, waste management and many other sectors.

# conclusion

- Ecosan latrines for better low income communities and protecting pollution of our environments in peri urban areas.
