

SFD Thinking

A comparison of methods for excreta flow analysis: WHO/UNICEF JMP and SFD PI

Wherefrom do we get data on the sanitation status in cities and countries and what qualities do these data need to have to be relevant either for JMP reporting or to be used in developing an SFD for a given city?

Against this background, the comparison of methods for excreta flow analysis gives an overview on the focus, purpose, methodologies, outputs and definitions of two approaches. On the one hand the WHO/UNICEF Joint Monitoring Program (JMP) and on the other hand the SFD approach, as developed by the SFD PI.

SFD Thinking: A comparison of methods for excreta flow analysis

The SFD Promotion Initiative collects examples and feedback on ways in which SFDs are used. These experiences are documented as the 'SFD Thinking'.
